

PROJECT MANAGER DIGITAL F/M

"It's the variation, really, the variation, that I like most about my job. I handle so many different projects, from websites to connected products, and I work with so many different people, like clients and external suppliers."
– Wolfgang, Delivery manager

Take ownership of digital projects ranging from websites, to apps, to connected products and services. As a delivery manager, you'll be the technical counterpart on projects for our clients, suppliers and team. So, not only will you be responsible for high-quality project planning and execution, you'll have a hand in the continuous enhancement of our processes.

You are also the interface! You will work with content managers and designers to get an overview of every project, as well as with programmers and testers to ensure that best-in-class functionality is always delivered. As the final authority for launches, you'll have responsibility for acceptance testing on the client side and live environment deployment. After a go-live, your challenge will be continuing to support our clients, including the evaluation of projects and gathering feedback from pilot and public users.

To ensure every digital deliverable is delivered, you need:

- > Experience with Agile and Scrum methodologies and ideally have played the role of "scrum master" a few times.
- > Knowledge of and experience with time-cost-quality project management standards.
- > Practical understanding of the cloud service Azure. JIRA and Confluence knowledge is a plus.
- > To be fluent in programming jargon and are able to work well with both backend and frontend developers.
- > Feedback and performance tracking experience.
